

SHAWN SUTHERLAND

Full-Stack Developer

I'm a **Ruby on Rails web developer** with four years of experience building applications on various platforms. Previously I worked as a technical writer where I became adept at writing, editing, and maintaining digital content using an array of tools and programming languages. Since 2022 I have worked as a freelance web developer and part-time teacher at Le Wagon, where I teach students how to use Ruby on Rails, JavaScript, HTML, CSS, and SQL. My **portfolio** includes apps I have built for my clients, including a **social media app for musicians** and a **tutoring app for primary students**.

Education

2006-09

Bachelor of Arts

Saint Mary's University

2009-11

Journalism

Toronto Metropolitan University

2015

Technical Writing

Simon Fraser University (online)

2022

Full-Stack Development

Le Wagon Amsterdam

Expertise

- Web development (HTML, CSS, JavaScript, React, Ruby on Rails)
- UI / UX optimization
- End-user documentation
- Content management systems
- Agile, kanban, and scrum

Experience

2022 - Present

Freelancer | Remote

Freelance Web Developer

As a freelancer, I build custom web applications for clients sourced via Bamboe.io. I help translate their ideas into structured plans on Figma, then we define the scope before I begin to deliver the project using Agile methodologies. Projects are version-controlled with GitHub and built with a modern stack (Ruby on Rails, React, HTML, CSS, JavaScript, PostgreSQL, Redis, Mapbox, Cloudinary, Bootstrap, Sass, Stimulus). In past projects I have implemented a variety of dynamic features, such as real-time messaging systems, user-generated content (posts and comments), and scheduled notifications. Key responsibilities include:

- UI/UX design and prototyping in Figma
- Developing full-stack applications with Ruby on Rails
- Managing databases and backend logic (PostgreSQL)
- Implementing interactive frontend features with JavaScript
- Client collaboration, scoping, and timeline planning
- Iterative delivery and progress reporting

2022 - Present

Le Wagon | Europe

Teacher and Guest Lecturer - Web Development

I also teach web development at Le Wagon at their various campuses around Europe (in the Netherlands, Belgium, Portugal, etc.) This includes:

- Preparing and giving lectures
- Guiding students through their daily coding challenges
- Leading live-coding sessions at the end of the day
- Ensuring students' progression throughout the course

Students are trained in Ruby, JavaScript, HTML5, CSS6, PostgreSQL, GitHub, Figma, and Heroku. Additionally, I have taught public workshops and tutorials to promote the company (for example, showing attendees how to create their first landing page using basic HTML/CSS). Throughout my time at Le Wagon, I've dedicated myself to further skill development, expanding my proficiency in various frameworks and libraries such as React, Vite, Vue, and Angular.
